

## What is your diagnosis?

A 28-year-old woman presented at the outpatient clinic with a complaint of dizziness. She denied a syncope or presyncope. She did not have a history of drug use. Her medical history was normal. Physical examination findings were normal. Her heart rate and blood pressure were 95 and 130/75, respectively. Her electrocardiogram is displayed in Figure 1. A 30-second rhythm strip also showed the same rhythm. Echocardiography findings were normal. Laboratory test results were normal. What is your preliminary diagnosis?

- A. Left bundle branch block
- B. Accelerated idioventricular rhythm
- C. Preexcitation syndrome
- D. Nonspecific intraventricular conduction delay

**Figure 1.** ECG of the patient at presentation showed wide QRS complexes

**Answer:** p. 165
